

COLLECTED IN SUPPLY CONTAINERS, SMALL  
DRUMS 125L & 205 LITRE BARRELS  
FROM OUR CUSTOMERS

TRANSPORTED BY  
LICENSED WASTE  
CARRIER

UNLOADED AT J&G  
STORED IN CHEMICAL  
STORAGE AREA

RE PACKED IF  
NECESSARY

ALL FLAMMABLES  
MOVED TO THE  
SOLVENT STORE

STORED PRIOR  
TO DISPOSAL

DESPATCHED FOR  
RECOVERY/DISPOSAL TO  
OUR WASTE FACILITY  
AT LANSTAR

## FLOW CHART PAINT / VARNISHES

EWC: 080111

Can Be used (FLAMMABLE ) as fuel to start blast furnaces, or as a low grade fuel  
The toxic oil based Inks are put through a Solidification treatment process, this uses  
Lime/Fly Ash to produce low-strength cementation. The resultant Solidified waste  
is disposed of through 'Hazardous waste Landfill' and as so is subject to current landfill  
legislation. The process produces "Physical, Chemical and biological changes to the waste  
which reduces the hazardous properties to make it safe for final disposal. This process is  
widely used in the USA where it is utilised within the Comprehensive Environmental  
Response, Compensation and Liability Act (CERCLA).
