

COLLECTED IN SUPPLY CONTAINERS, SMALL
DRUMS 125L & 205 LITRE BARRELS
FROM OUR CUSTOMERS

TRANSPORTED BY
LICENSED WASTE
CARRIER

UNLOADED AT J&G
STORED IN CHEMICAL
STORAGE AREA

RE PACKED IF
NECESSARY

ALL FLAMMABLES
MOVED TO THE
SOLVENT STORE

STORED PRIOR
TO DISPOSAL

DESPATCHED FOR
RECOVERY/DISPOSAL TO
OUR WASTE FACILITY
AT LANSTAR

FLOW CHART UV WASH INK

EWC: 080111

Can Be used (FLAMMABLE) as fuel to start blast furnaces, or as a low grade fuel
The toxic oil based Inks are put through a Solidification treatment process, this uses
Lime/Fly Ash to produce low-strength cementation. The resultant Solidified waste
is disposed of through 'Hazardous waste Landfill' and as so is subject to current landfill
legislation. The process produces "Physical, Chemical and biological changes to the waste
which reduces the hazardous properties to make it safe for final disposal. This process is
widely used in the USA where it is utilised within the Comprehensive Environmental
Response, Compensation and Liability Act (CERCLA).
